INSTRUCTIONS

MOTION PRO COMPRESSION TESTER P/N 08-0651

The Motion Pro Compression Tester is designed for use on gasoline engines with 10mm, 12mm, and 14mm spark plugs.

WARNING! Do not place the spark plugs or their caps where a spark could ignite spilled fuel or fuel vapors and cause a fire or explosion. Refer to the manufacturer's service manual for specific instructions pertaining to your application.

Getting Started

1. Bring the engine up to operating temperature.
2. Remove all spark plugs (for ease of cranking).
3. Select the correct brass adapter provided for correct fitment with the motorcycle spark plug hole (**fig3a**). Thread the connected brass adapter and hose into the cylinder spark plug hole to begin testing (**fig3b**). **Note:** Make sure the adapter o-ring seats at the spark plug sealing surface.
4. Install the gauge to the hose with the quick release connection.

Ready To Test

5. With the engine on/off switch in the off position begin cranking (**fig 5a**). Fully open the throttle and continue to crank the engine over until maximum compression is indicated on the gauge (**fig 5b**).
